

<p>Power Standard 1: Apply properties to expressions</p> <p>Represent the following expression as one rational number. Show and explain your steps.</p> $\frac{16}{20} - (-1.8) - \frac{4}{5}$ <p style="text-align: center;">Effort</p>	<p>Power Standard 2: Identify ordered pair proportions</p> <p>The graph to the right shows the relationship of the amount of time (in seconds) to the distance (in feet) run by a jaguar. What does the point (5, 290) represent in the context of the situation?</p>  <p style="text-align: center;">Effort</p>
<p>Power Standard 1: Apply properties to expressions</p> <p>Represent the following expression as one rational number. Show and explain your steps.</p> $\frac{16}{20} - (-1.8) - \frac{4}{5}$ <p style="text-align: center;">Answer</p>	<p>Power Standard 2: Identify ordered pair proportions</p> <p>The graph to the right shows the relationship of the amount of time (in seconds) to the distance (in feet) run by a jaguar. What does the point (5, 290) represent in the context of the situation?</p>  <p style="text-align: center;">Answer</p>

Power Standard 3: Solve varied rational numbers	Power Standard 4: Solve multi-step problems
<p>Mr. Rodriguez invests \$2,000 in a savings plan. The savings account pays an annual interest rate of 5.75% on the amount he put in at the end of each year. How much will Mr. Rodriguez earn if he leaves his money in the savings plan for 10 years? Solve and explain why your solution is reasonable.</p> <p style="text-align: center;">Effort</p>	<p>Vests are on sale for 25% off. The sale price is \$18.75. What was the original price of the vests? Explain your thinking.</p> <p style="text-align: center;">Effort</p>

Power Standard 5: Divide rational numbers Divide. Show your thinking. $-120 \div -10$	Power Standard 6: Solve real world inequalities Ben has agreed to play fewer video games and spend more time studying. He has agreed to play less than 10 hours of video games each week. On Monday through Thursday, he plays video games for a total of $5\frac{1}{2}$ hours. For the remaining 3 days, he plays video games for the same amount of time each day. Find $t$ , the amount of time he plays video games, for each of the 3 days. Graph your solution.
Effort	Effort
